Abstract

Bibliometric analysis is widely recognized in academic research for uncovering trends and insights. This study reviews the literature on the topic of travel insurance, which provides coverage for medical expenses or risks incurred during travel. For global travelers, travel insurance is essential, as it helps cover costs related to injuries or medical needs while traveling. The COVID-19 pandemic severely impacted the tourism and hospitality industries, leading to a significant decline in travel activities in 2020. The pandemic also brought changes to health and medical trends, which in turn influenced the evolution of travel insurance policies. This study evaluates five key clusters related to travel insurance, revealing a substantial body of research on the topic. The findings also highlight emerging trends and future directions for the travel insurance industry.

Keywords: Travel Insurance; travel; Covid-19; Insurance; Australia.

1. Introduction

The increase in trend of traveling had been increased globally. Travel insurance is the significant document which could cover the medical expenses during the global traveling under the certain circumstances. In basic terms, travel insurance could endorse the healthcare and travelling cost paid by the tourist for international tour. It manages the aeromedical departure for tourists due to uncertain health situations which is considered in the policy of travel insurance (Sarman I, Curtale R., 2020).

The tourists are recommended to buy the travel insurance for security of health under numerous requirements. Last previous research studies had shown that 22 to 64 percent of international tourists fall ill or face health issues during or after the traveling (Oshita Y, Tsuchiya K, Ishikawa K, Hirabayashi K., 2020). It had been considered that the increase of travelers could create risk of spreading of infectious disease (Rahman MK, Gazi MAI, Bhuiyan MA, 2021). The health risks are considered to be the companion of travelers because of international healthcare policies, global conflicts and pandemic of corona-virus. Before Covid-19, the travelers usually don't need the travel insurance. But the trend had been changed which had provided the guideline for the safety and security of health of travelers. The travelers had changed their mindset and willingness of purchase traveling insurance to reduce the risk of corona virus or any other health issues.

This research study focuses on the bibliometric analysis on the topic travel insurance. From past few years, Bibliometric analysis had gained importance in business research (Donthu et al., 2020). It became famous because of various attributes such as advancement, accessibility of software like VOSviewer, Gephi, Leximancer as well as various scientific databases like Scopus, Web of Science and cross-disciplinary pollination of methodology in terms of both science and business. Significantly, bibliometric analysis is famous in terms of business research due to the consideration of utility of scientific data handling and constructing larger impact of research. Moreover, researchers and scholars uses bibliometric analysis because of several reasons like analysis of developing trend in performance of journal, collaborative patterns, and constituents of research as well as exploring of intellectual structure of specified area of literature (Donthu et al., 2021). Furthermore, this research study includes the detailed literature review with methodology and discussion on topic. Further the research study focuses on categorization of documents, co-cited of authors, top journals, top cited organizations, countries, co-authorship analysis and keyword analysis on travel insurance field.

2. Literature Review

From the past few years, the increasing trend in international traveling had been seen. It had been analyzed that around 700 million people travel by air transportation every year around the globe (P.A. Leggat et al., 2004). The conducted estimation shows that 30 – 50% of people during or after traveling become injured or ill (P.A. Leggat et al., 2002). Furthermore, it is estimated that each year around 3.5 million Australians travel internationally. They are exposed to infectious diseases which creates severe threats for them in terms of injuries from medication. The risk of

injuries is high among the person who travels abroad. In this situation, travel insurance supports traveling, dental and medical expenses acquired by international travelers well as arranging aeromedical evacuation with specific conditions under the policy of travel insurance. Moreover, a travel insurance organization provides services in times of emergencies, assisting international travelers in medication and aeromedical evacuation (G.J. Southwick et al., 2002). The pandemic of Covid-19 had impacted badly tourism as well as the hospitality industry around the world. As per UNWTO (United Nations World Tourism Organization, 2020), a decrease of 20 – 30% had been seen in the year 2020 that had resulted in a loss of around 440 million global tourists, even economic damage of approximately \$460 billion.

The major challenge for health professionals and the travel industry is that pre-travel health guidance from qualified persons had become compulsory in many countries. The travelers had to gain health advice from health professionals, traveling clinics, public health institutions, hospitals, or health centers. Thus, it had been evaluated around 44% seek pre-travel health instruction from travel agents while 65% prefer general practitioners. Significantly, the health advice provided to travelers are specified to the destination, elaborates on any allergies or medical issue already the traveler had, and depending upon the traveling nature and time duration of traveling, with adequate time. Thus, it is important for travelers to take preventive measures and treatments against traveling diseases.

This research study will focus on six questions that include: (1) what are the challenges and trends in Travel Insurance? (2) What are the papers on Travel insurance? (3) the most-cited journals on travel insurance? (4) Which are the most influential authors, organizations, and countries related to travel insurance? (5) Which are the most-cited authors of travel insurance? (6) What are the major travel insurance clusters?

The research study could contribute to the literature in various manners. It supports identifying the multiple papers on travel insurance, classifying the literature in 5 clusters while supported in elaborating on the influential countries as well as the organizations. The research study also contributes to future research. Further, in section 3 methodology and data had been discussed. Section 4 elaborates on the results and discussion related to content. In section 5, future research had been discussed while the section shows the limitations of the study. In the end section 6 consist of the conclusion of the research.

3. Methodology and Data

In this research study, bibliometric evaluation is conducted through the integration of qualitative as well as quantitative elements which are based on the analysis of performance, visualization, and bibliographic coupling. The bibliometric analysis supports evaluating the trends in various articles, the performance of journals, the integration of patterns, and exploring the intellectual structure of specified domains in literature (Donthu et al., 2021). Moreover, the bibliometric analysis supports evaluating the existing research on a specified topic. Significantly, this research study is based on various bibliometric tests that include citation analysis, keyword analysis, and co-citation analysis.

Cite space as well as VOSviewer software were used for bibliometric tests and analyses. VOSviewer is a software that constructs and visualizes the bibliometric data network (articles, journals, publications, and researchers) which can be developed depending on the citations, co-citation, bibliographic coupling and co-authorship. Significantly, it provides the functionality of text mining which could be utilized for constructing of co-occurrence of essential terms that can be extracted from literature (VOSviewer, 2002). VOSviewer helps to convert data into visual maps and graphics that facilitate the viewing and understanding of information. On the other hand, Scopus is a tool which is used for combining the comprehensive abstract as well as citation database that are connected with the literature among the variety of areas. It supports finding the relevant research, evaluates experts and gives accessibility to the reliable data, analytics and metrics tools.

Content analysis is used for quantifying the specified words or topics of articles and journals (Amy, L, 2022). For starting the content analysis of this research, keywords were finalized related to travel insurance which was used in the literature on this topic. The study includes documents in terms of the Scopus database which was also deemed in previous studies. Total 208 documents were evaluated on the keyword “Travel Insurance” which includes articles, journals, and documents related to this topic. Further, the filter of cleaning was implemented to only evaluate certain journals and articles to the keyword query, which finalized 178 documents.

Both inclusion and exclusion criteria of keyword query is mentioned in Table 1, it considers the PRISMA procedure which shows that the research had been limited to 178 journals and articles only.

Table 1: The search query for insurance fraud documents

Description	Conditions	Number of Documents
Search query TITLE-ABS-KEY	TITLE-ABS-KEY (("travel* insurance") OR ("flight insurance") OR ("trip insurance") OR ("tour* insurance") OR ("sightseeing insurance") OR ("sight seeing insurance") OR ("sight-seeing insurance") OR ("visit* insurance") OR ("covid-19 insurance") OR ("covid 19 insurance") OR ("covid19 insurance") OR ("coronavirus insurance") OR ("corona virus insurance"))	208 Documents
Access	We included both open access and non-open access documents.	178 Documents
Query search date	November 8, 2022	
Years	All years (1968 – 2023) only one document in 2023	
Document type	We have Excluded books	
Subject area	We have included all subject areas.	
Source type	We have excluded trade journals and books	
Language	We have limited the search to documents written in English.	

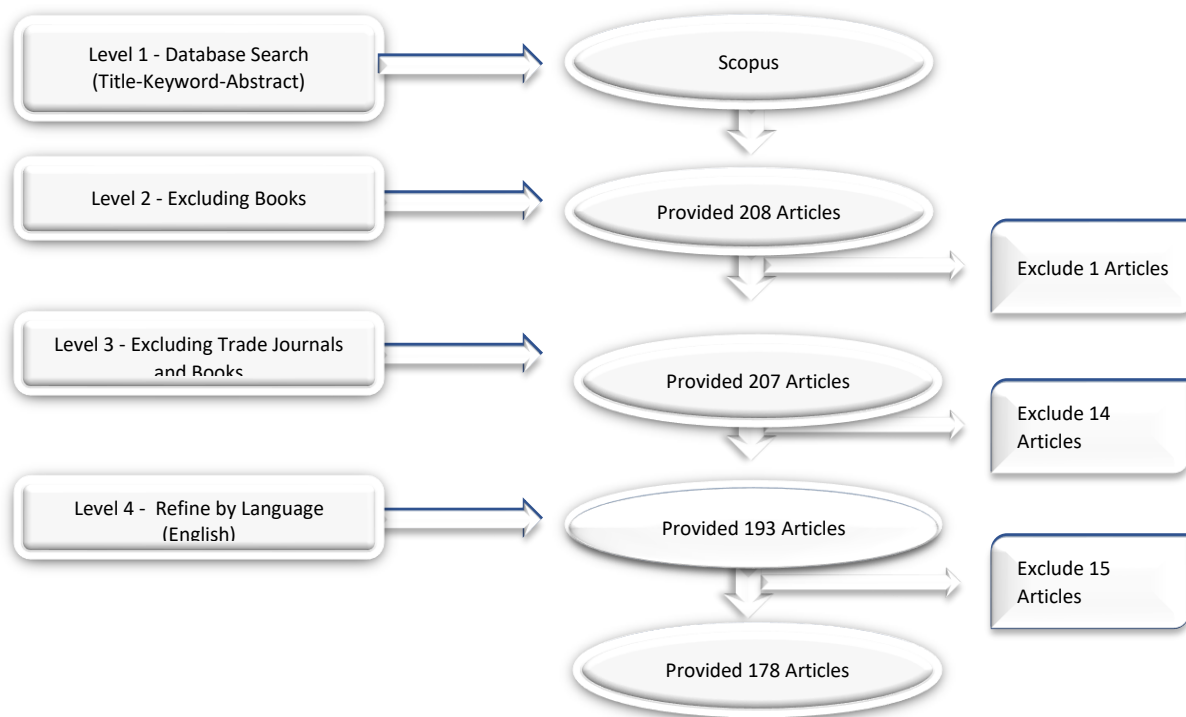

Fig. 1 PRISMA chart - Process applied for delimiting literature

4. Results and Discussions

4.1 Evolution and growth in Travel insurance research over time

Figure 2 elaborates the number of documents which was published on the topic “travel insurance”. The first article or research paper on travel insurance was published between 1965 to 1970. There was no published article between 1970 to 1980 as this field development was slow. From 1981 to 2020 there is an increase in the number of articles. The increase in these years shows that the researcher’s interest towards travel insurance unexpectedly increased. The below figure shows that between 2000 to 2020 large number of articles were published.

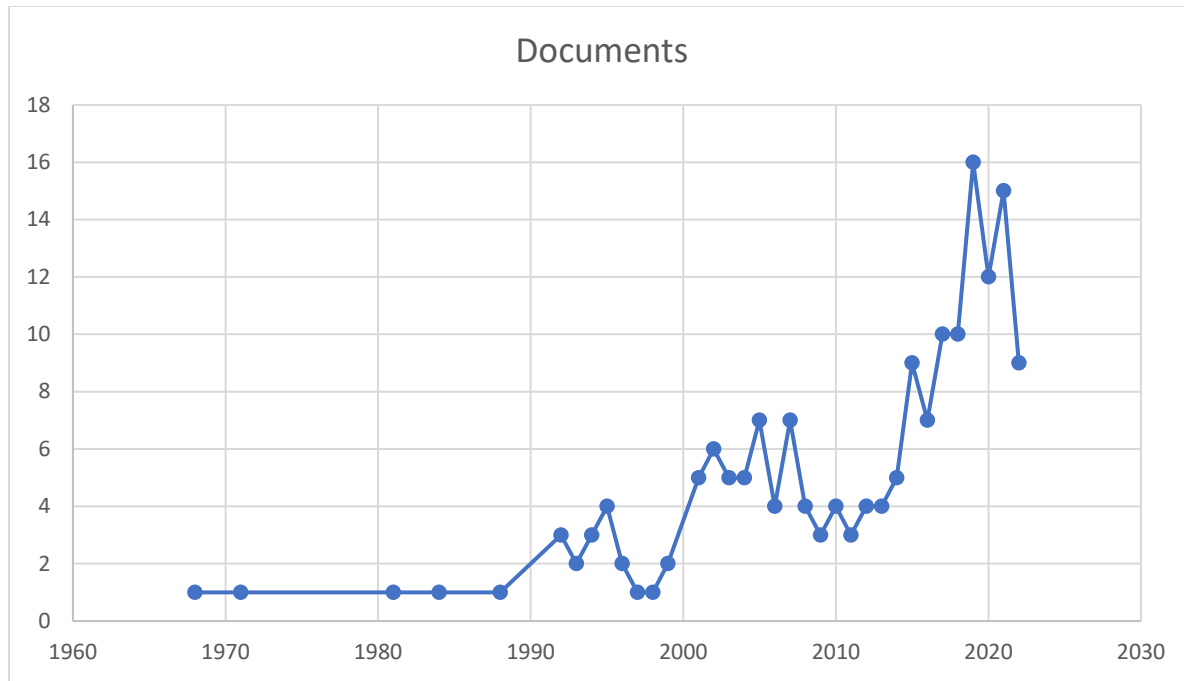

Fig. 2. Publication growth of Travel insurance research for all documents and journal articles.

Table 2: Rate of production of articles per year and the annual growth rate

Year	No. of Articles Published per Year	Percentage of No. of Articles Published Per Year	Cumulative growth of Published Articles Per Year	Annual Growth Rate (AGR) of Published Articles Per Year (%)*
1968	1	0.56%	0.56%	-
1971	1	0.56%	1.12%	0%
1981	1	0.56%	1.69%	0%
1984	1	0.56%	2.25%	0%
1988	1	0.56%	2.81%	0%
1992	3	1.69%	4.49%	200%
1993	2	1.12%	5.62%	-33%
1994	3	1.69%	7.30%	50%
1995	4	2.25%	9.55%	33%
1996	2	1.12%	10.67%	-50%
1997	1	0.56%	11.24%	-50%
1998	1	0.56%	11.80%	0%
1999	2	1.12%	12.92%	100%
2001	5	2.81%	15.73%	150%
2002	6	3.37%	19.10%	20%
2003	5	2.81%	21.91%	-17%
2004	5	2.81%	24.72%	0%

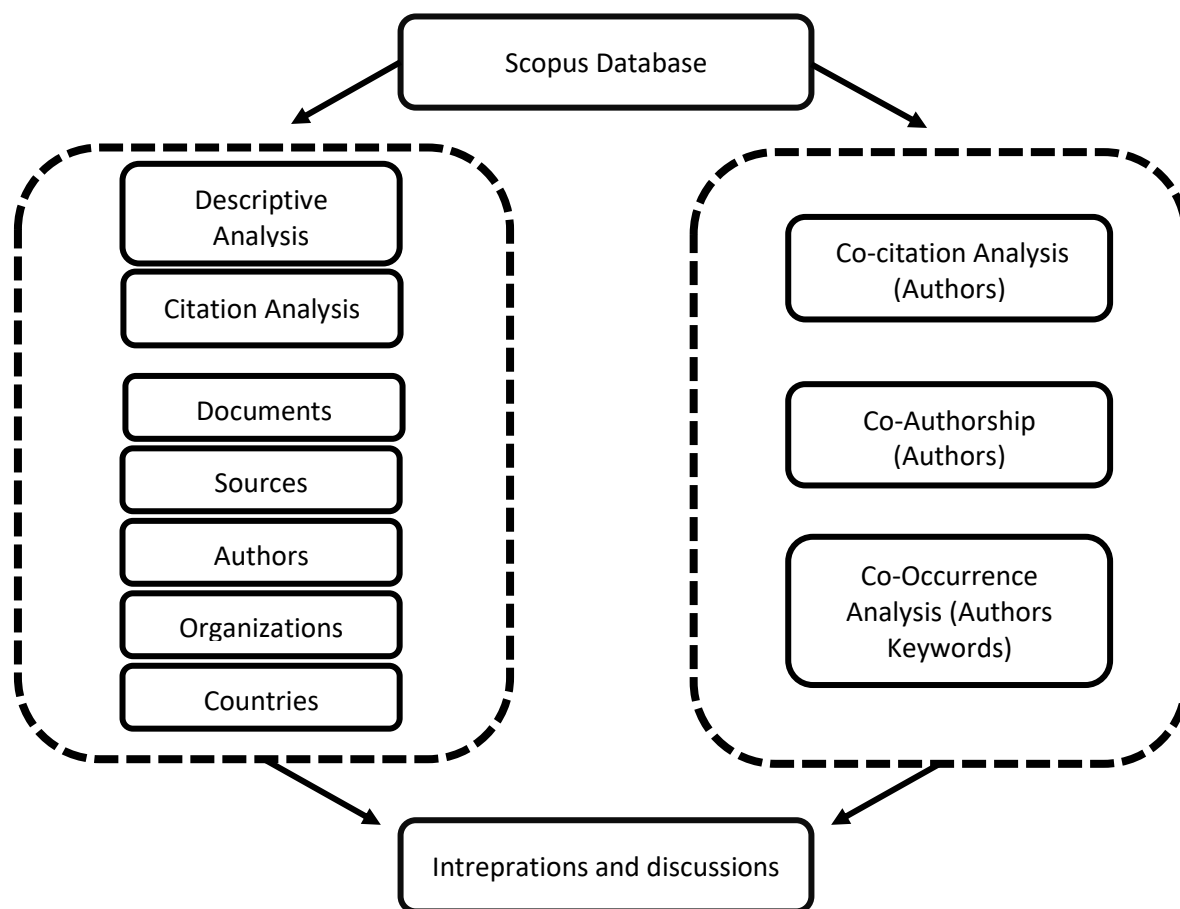

Fig.2 Methodology

4.2 Distribution of Documents

In this section, the distribution of documents of academic literature related to travel insurance topics is conducted for exploring the multiple patterns of published articles. A total number of 208 documents was obtained through the help of the Scopus database. Out of 208 documents, 178 documents were finalized which was according to the certain topic. The 178 documents were categorized into various types which are shown in Figure 3. Furthermore, similar documents are further distributed in various subjects which are represented in Figure 4. Both Figures 3 and 4, represents the trends that are analyzed across overall data. In Figure 3, it had been analyzed that around 73% of documents are published journal articles, while 15.7% are conference papers. On the other hand, Figure 4 shows that the research on travel insurance is mostly conducted in the field of medicine, business, and management. 1.9% of research was conducted in the field of mathematics.

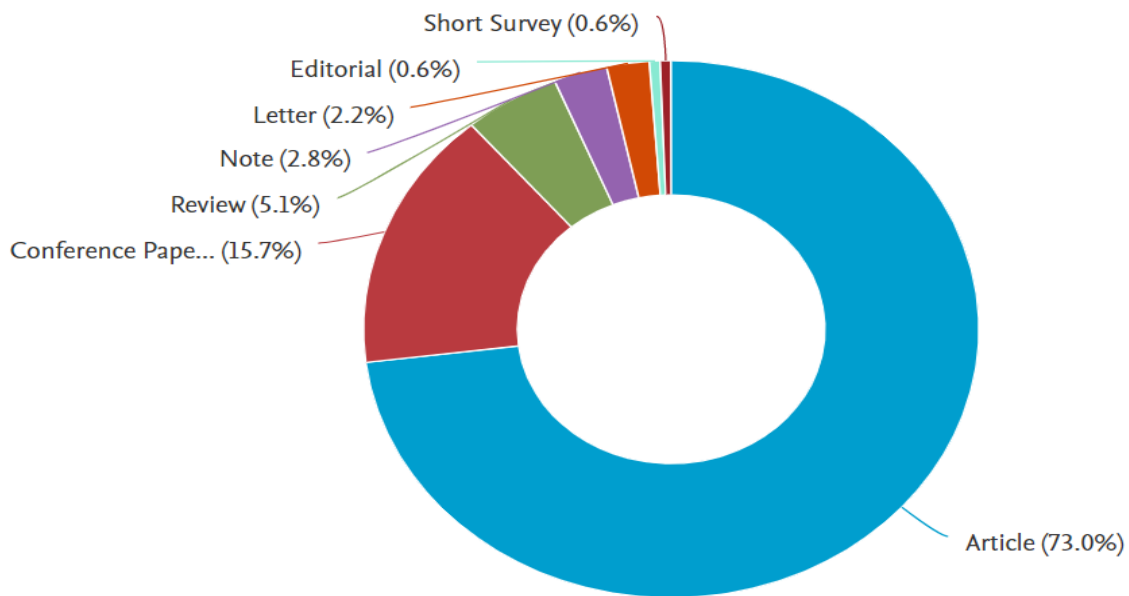

Fig. 3. Documents by type, based on the 178 documents discovered in the Scopus database

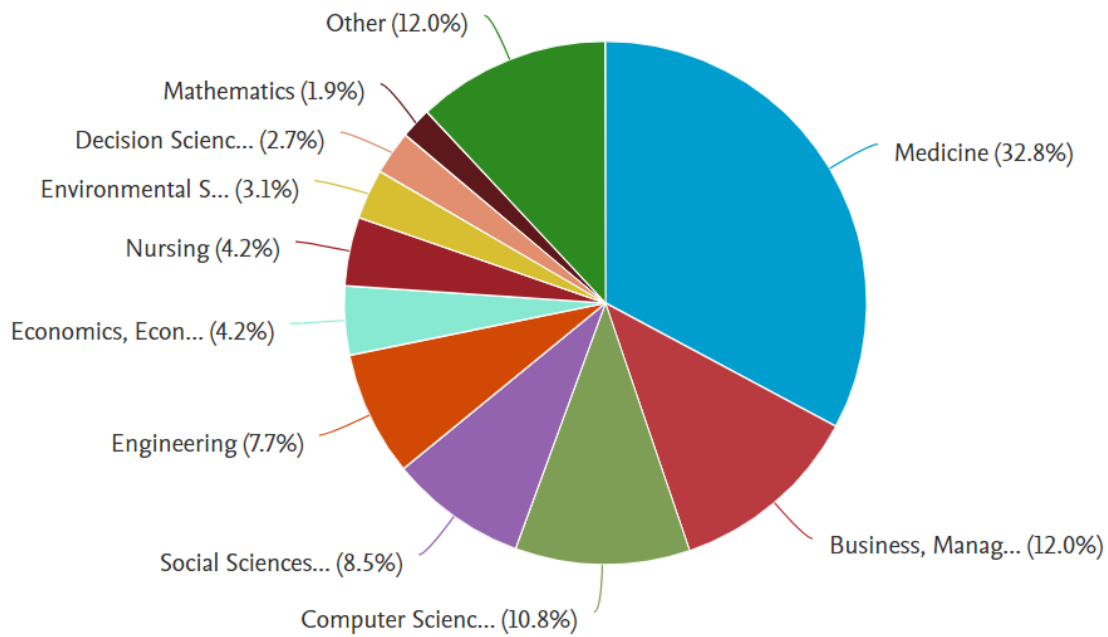

Fig. 4. Documents by subjects, based on the 178 documents discovered in the Scopus database

4.3 Citation Analysis of journals articles

The travel insurance is not the new topic, the research had been conducted for many years and there is a large number of journal articles on this topic. The analysis of the topic includes 178 journal articles. The papers are represented in Appendix A with the citations, clusters, and content. The overall findings show that topics are diversified in all papers. Most of the studies are conducted on medicine while the remaining studies focus on business and management, or any other tourist-related topic.

4.4 Top journals

The table below (Table 3) shows the number of documents with citations of journals for 178 journal articles. The table shows that each journal had a minimum of two documents, and the citations differ in all journals. Travel medicine and tourism management perspectives had the same and a high number of citations. The Figure 5 further categorized the research on medicine in travel insurance.

Table 3: Top cited journals for the 178 articles discovered in the Scopus database

Rank	Source	Documents	Citations	Scopus Citescore	Publisher
1	Journal of Travel Medicine	9	181	15.2	Oxford University Press
2	Tourism Management Perspectives	1	181	10.0	Elsevier
3	Pediatrics	1	170	10.6	American Academy of Pediatrics
4	Critical Care Medicine	1	119	15.0	Wolters Kluwer Health
5	Travel Medicine and Infectious Disease	9	103	14.8	Elsevier
6	International Journal for Quality In Health Care	1	93	3.3	Oxford University Press
7	Climate Services	1	78	7.8	Elsevier

9	Journal of Travel and Tourism Marketing	4	69	12.0	Taylor & Francis
10	Journal of Public Health Dentistry	2	54	3.4	Wiley-Blackwell

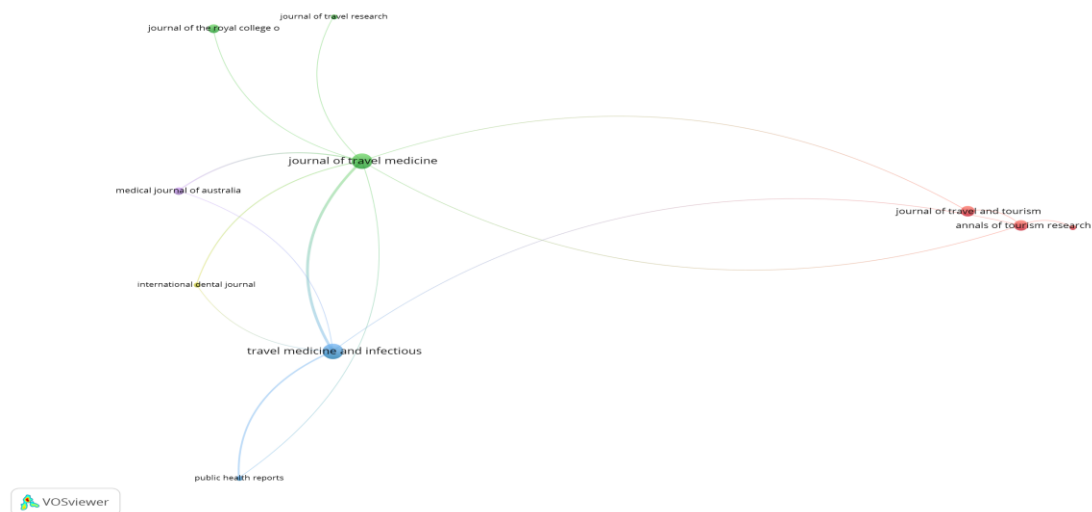

Fig. 5. Top sources for the 178 documents discovered in the Scopus database

4.5 Publications and citations by authors

The below table (Table 4) represents the number of documents as well as citations done by each author. The top author on this topic is Leggat P.A. who had written 11 documents which is the highest number among all authors with 176 citations. All other authors had written only 1 document. Akbıyık A. and Ugur N.G., had the highest number of citations which was 181. Dorell C.G., Markowitz L.E., Santibanez T.A., and Yankey D. documents had 170 citations. The remaining authors had documents with 119 citations. Figure 6 elaborates the VOS view of authors for 178 documents.

Table 4: Top cited authors for the 178 articles discovered in the Scopus database

Rank	Author	Documents	Citations
1	Akbıyık A.	1	181
2	Ugur N.G.	1	181
3	Leggat P.A.	11	176
4	Dorell C.G.	1	170
5	Markowitz L.E.	1	170
6	Santibanez T.A.	1	170
7	Yankey D.	1	170
8	Doebbeling B.N.	1	119
9	Durairaj L.	1	119
10	Torner J.C.	1	119

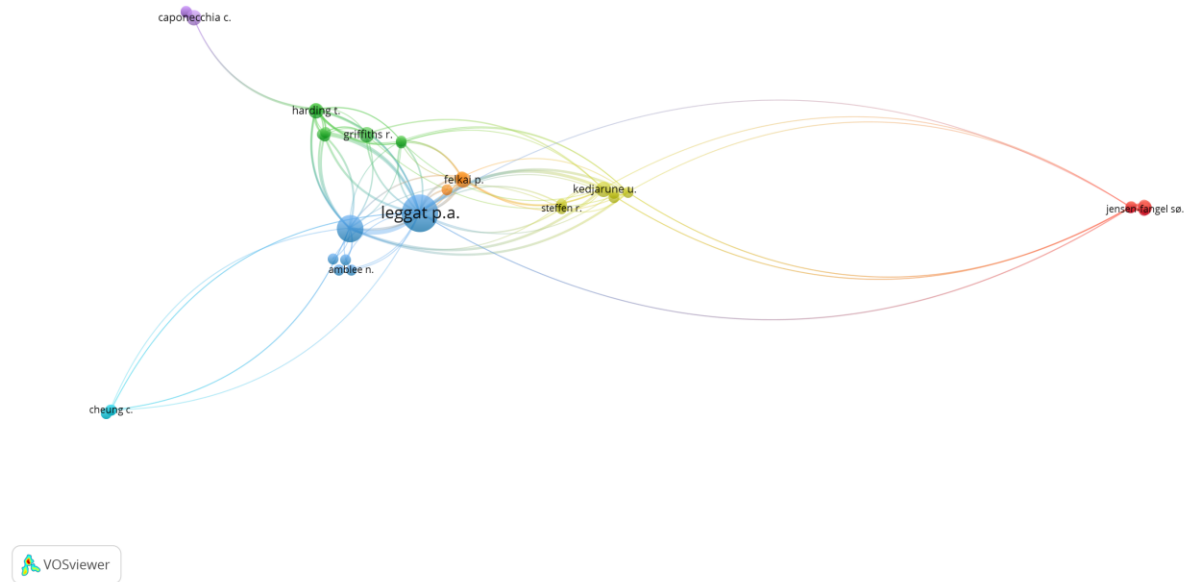

Fig. 6. Top cited authors for the 178 documents discovered in the Scopus database

4.6 Top organizations

Table 5 shows the number of documents and citations based on the organization. Sakarya University, Turkey had the greatest number of citations. Centers For Disease Control Prevention, Centers for Disease Control and Prevention, United States had the second biggest number of citations which is 170. The University of Iowa in Department of Epidemiology and Department of Internal Medicine had 119 citations. While the remaining universities had an average number of citations. Figure 7 elaborates on the VOS view of the top-cited universities.

Table 5: Top cited organizations for the 178 documents discovered in the Scopus database

Rank	Department	University	Country	Documents	Citations
1	Dept. of Management Information Systems	Sakarya University	Turkey	1	181
2	Division of Immunization Services	Centers For Disease Control and Prevention	United States	1	170
3	Division of Sexually Transmitted Diseases	Centers for Disease Control and Prevention	United States	1	170
4	Department of Epidemiology	University of Iowa	United States	1	119
5	Department of Internal Medicine	University of Iowa	United States	1	119
6	Iowa City VA Medical Center	Iowa City VA Health Care System	United States	1	119

10	Sch. of Pub. Health And Trop. Med	James Cook University	Australia	2	68

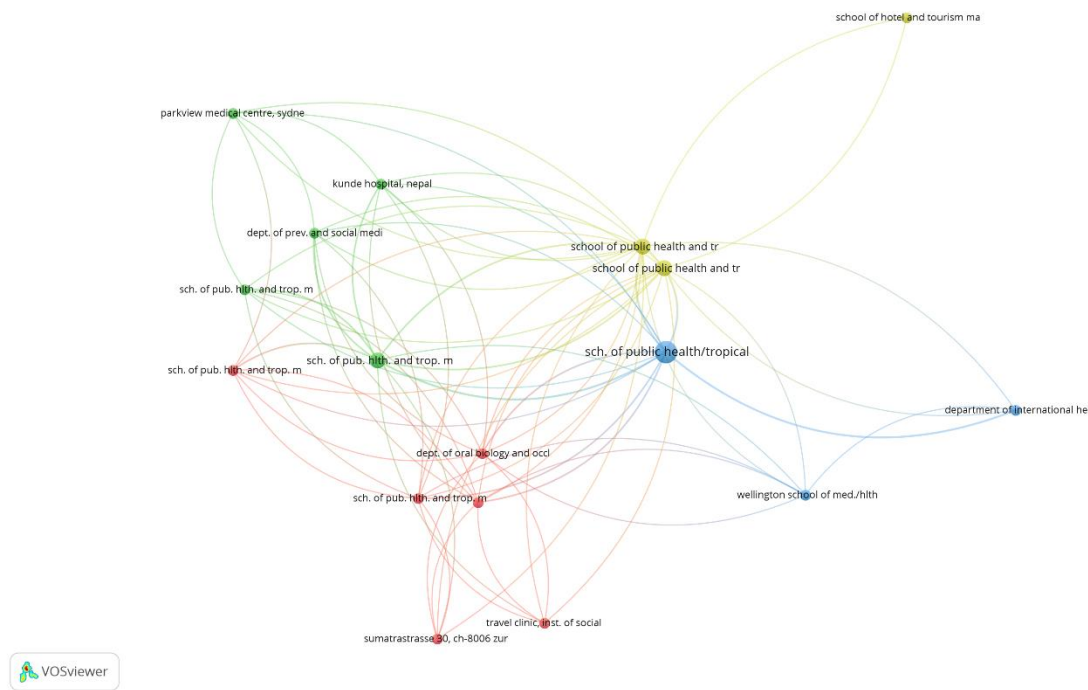

Fig. 7. Top cited organizations for the 178 documents discovered in the Scopus database

4.7 Top countries

Below Table 6 shows the number of documents based on citations by a country wise. The United States contributed the most to the publications of travel insurance with 51 documents and 228 citations. Secondly, Australia contributed 24 documents and 262 citations. While Vanuatu contributed with 1 document and 198 citations. Taiwan contributed 7 documents with only 34 citations. Norway contributed only 1 document with 34 citations. Figure 8 elaborates on the VOS view of citations by country.

Table 6: Top cited countries for the 178 documents discovered in the Scopus database

Rank	Country	Documents	Citations
1	Australia	24	262
2	United States	51	228
3	Vanuatu	1	198
4	China	7	67
5	Denmark	3	58

6	United Kingdom	24	50
7	Norway	1	49
8	Switzerland	3	35
9	Singapore	2	34
10	Taiwan	7	34

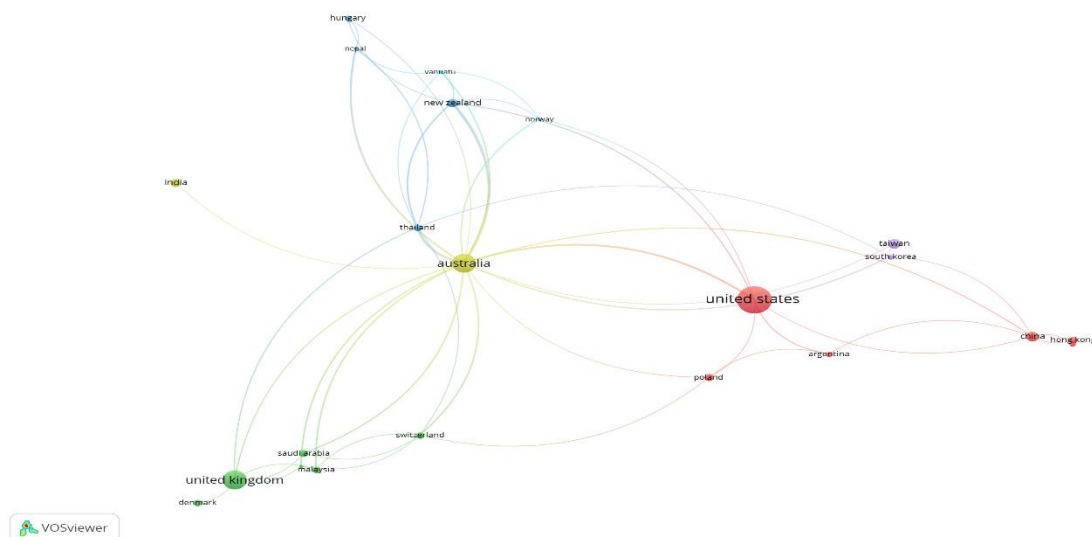

Fig. 8. Top cited countries for the 178 documents discovered in the Scopus database

4.8 Co-citation analysis of authors

This section's co-citation analysis supports identifying frequently cited references in each document. Table 7 shows the co-cited authors with link strength. Leggat, P.A. is the author with the highest citations of around 54 and his link strength is 1049. Steffen, R. used 32 citations, having 588 link strength. The results show that they had worked to provide high-quality content on the concerned topic. Figure 9 elaborates on the VOS view of Co- citations of authors.

Table 7: Co- citations of authors for the 178 documents discovered in the Scopus database

Rank	Author	Citations	Total Link Strength
1	Leggat, P.A.	54	1049
2	Steffen, R.	32	588
3	Law, R.	17	551
4	Mitchell, V.W.	13	459

5	Reichel, A.	13	434
6	Leggat, F.W.	18	423
7	Fuchs, G.	11	370
8	Cheung, C.	8	330
9	Ritchie, B.W.	10	310
10	Gibson, H.	11	302

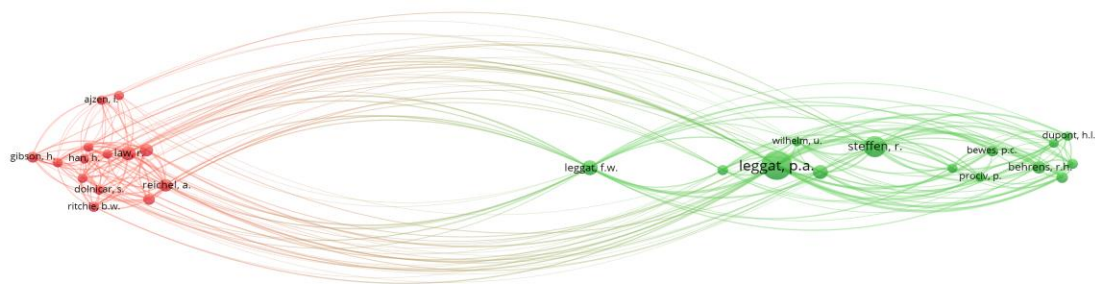

Fig. 9. Co-citation analysis at the authors' level was created by using VOSviewer based on the 178 documents discovered in the Scopus database

4.9 Keyword analysis

Occurrences of keywords are presented in Table 8. The results from the table show that travel insurance appeared as a common keyword with 32 occurrences. The table elaborates that travel insurance is the most attracted keyword that gains attraction of researchers. Figure 10 elaborates on the VOS view of Occurrences of keywords.

Table 8: Occurrences of keywords of the 178 documents discovered in the Scopus database

Rank	Keyword	Occurrences
1	Travel Insurance	32
2	Travel	9
3	Covid-19	8
4	Insurance	7
5	Australia	4

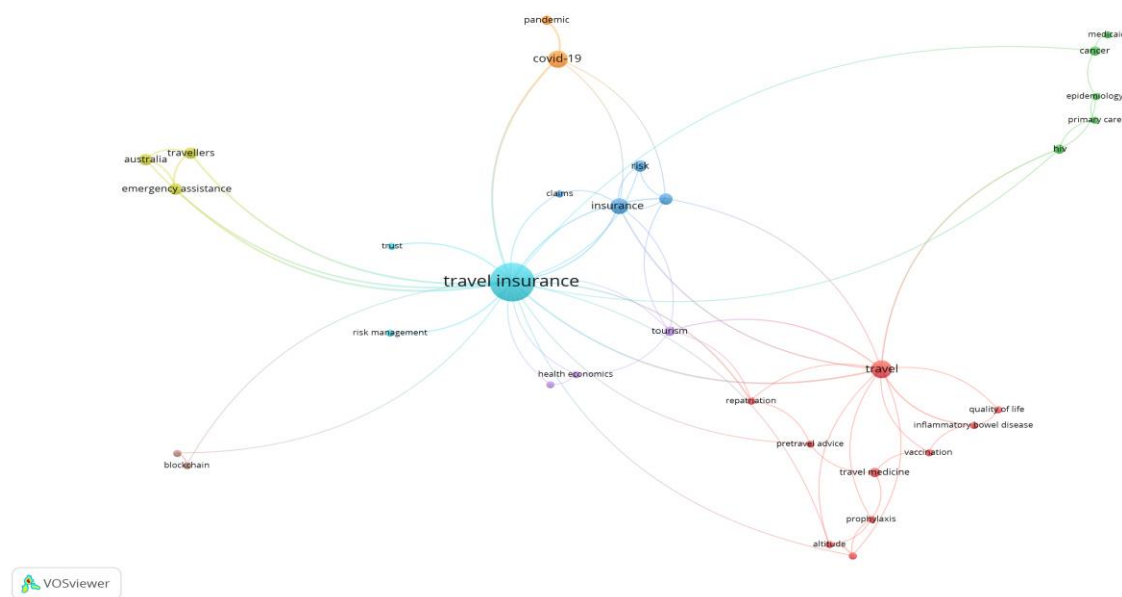

Fig. 10. A Visualization map of the most frequent keywords was created by using VOSviewer based on the 178 articles discovered in the Scopus database

4.10 Overall Discussion

This section elaborates on the overall finding of the research study. The main challenge considered that there is a lack of journal articles related to the change of trend due to Covid 19 around the world. After the pandemic of Covid-19, the medical changes had been analyzed by the countries. Most countries had made tests and vaccines compulsory for traveling while most countries need medical records for traveling purposes. There is a lack of study that rather Covid-19 also comes into traveling insurance or not. Secondly, there is a lack of journal articles on travel insurance in terms of finance and economics. The authors had not conducted the study on the economical view of the country through traveling and tourism. The findings evaluated the trend of travel insurance over the last many years and had shown that medicine had remained the major interest in this topic. Significantly, the number of research studies on travel insurance

increased in 1980. There are various authors who had published papers on travel insurance with the highest number of citations. Most importantly, Sakarya University, Turkey and United States are the leading university and country which had conducted the work on travel insurance.

5.Future Research

This section, (Figure 11) focuses on recent and future research. According to the analysis, future research is required in educating travelers to obtain travel insurance to reduce their medical expenses. The changing trend of health and safety during and after Covid-19 had developed changes in travel insurance globally. The study also suggests evaluating the beneficial ways which can be utilized by travelers during their journey to reduce medical expenses. The need to future study is required to analyze the health of patients with serious illnesses. Most importantly, a significant study is needed for the promotion of travel insurance by travel agencies for changing the purchase behaviors among insured and uninsured travelers.

What we already know ?

The travel insurance is concerned with the medical expenses during the global travelling.

There are various challenges and risk of medical health which need to be insured in global traveling.

The patients with chronic diseases had to travel for medical treatments or some other work.

A relationship between Purchase behavior and travel insurance.

Comparison between insured and uninsured travelers.

What we need to know ?

From the previous studies

Travel medicine is an important element. Medical health advisors are engaging in pre-travel plans in Australia. The emergency assistance service provides importance to travelers.

The pandemic Covid-19 had increased the medical concerns and reverse strategies towards travel insurance.

There is a risk for patients with chronic diseases including cancer. There is a lack of medical security for patients or people having a serious illness.

Willingness to purchase travel insurance during Covid-19 for health safety and security by the airlines.

The protocols, management, and care provided to insured travelers in comparison to uninsured travelers.

From this study

In what more ways the travel insurance can be utilized by travelers?

What new changes can be added to travel insurance due to Covid-19?

What medical benefits or safety can be provided to patients by travel insurance?

Why travel insurance should be purchased during and after Covid-19?

What strategies can be used for attracting uninsured travelers towards travel insurance?

Fig. 11. Directions for future research

6. Limitations

The research study provided in-depth details about the journals and articles related to the topic of travel insurance but still, there is a need for further study which had been discussed in this section in terms of limitations. Firstly, the keywords used for this study including the title, abstract, literature, and keyword was limited to travel insurance. Some of the documents were focusing on the tourism and hospitality industry while the major concern was on travel insurance in terms of medical and health. Most importantly the documents were obtained through the Scopus database, and it is considered that all the relevant published documents could not be included. Moreover, there is a need for keyword analysis related to the change of trend after Covid-19 and its impact on travel insurance. Because after Covid-19 various changes had been incurred in travel and health insurance which needs to be analyzed.

7. Conclusion

The research study was based on challenges and trends in travel insurance. This research study conducted a bibliometric and systematic review of the literature, analyzing the current trends while suggesting guidelines for future research. The research findings discuss the documents of authors, citations, keywords, organizations, and top countries in this research topic. The clusters discussed include Australia Perspectives, Travel Health, and Medical Insurance, Risks, Purchase Behavior and Travel emergency support and safety. The result from the study indicates that there is a lack of studies on Quality in Health Care, Climate Services, and Tourism Management Perspectives which only had 1 document. The research study had various limitations which indicate that there is a need for further research that can be conducted by various researchers in the future.

Appendix A.

Citation, content, and cluster analysis of the journal articles

Cluster	Title	Authors	Main Objective	Main Finding
Green Cluster Australia Perspective s	Travel medicine: An Australian perspective	Leggat P.A. (2005)	This research sought to highlight Travel medicine which is emerging as a contemporary interdisciplinary discipline delivering for increased number of global travelers.	A growing number of people are taking advantage of the services that modern, interdisciplinary fields like travel medicine can provide. Experts in travel medicine are sought out for guidance before leaving on an adventure, during the trip itself, and afterward, when it's time to assess any health issues or administer any treatments that may have arisen. As such, they play a crucial role in communicating with government health agencies about potential transboundary disease threats.
	Health advice given by general practitioners for travellers from Australia	Seelan S.T., Leggat P.A. (2003)	The purpose of this paper was to investigate whether or not Australian travelers valued receiving written documentation reports	According to the results of this cross-sectional study, GPs in Australia regularly request essential information from prospective travelers.

			from their family doctors outlining travel health advice.	General practitioners offer advice to vacationers on all aspects of health that should be discussed with a doctor before leaving the country.
	Emergency assistance provided abroad to insured travellers from Australia following the Bali bombing	Leggat P.A. (2004)	The benefits of purchasing adequate travel insurance are the focus of this research. Approximately 25% of claimants said they had used the emergency support service offered by the travelling insurer.	Travelers typically contact emergency assistance services for guidance on filing a claim or understanding their policy, but these organisations also help coordinate more immediate needs, such as transportation to the emergency room or dental work. American Medical Emergency was a high-quality but pricey service for those in need.
Blue Cluster: Travel Health and Medical Insurance	Willingness to pay for travel insurance as a risk reduction behavior: health-related risk perception after the outbreak of COVID-19	Choe Y., Kim H., Choi Y. (2022)	To further understand how health-related risk appraisal and sociodemographic variables influence WTP for airfare as a risk-mitigating behavior in the wake of the COVID-19 epidemic, this research aims to do the following. The research used Multiple	Tourists' willingness-to-pay (WTP) for travel insurance in the face of health-related risk concerns varies according to a number of factors, including their perception of risk, their demographic characteristics (such as age and level of education), and their past experience purchasing travel. Two

			determinants of value may be identified using a double-bounded categorical decision dependent valuation technique. cost of travel insurance.	distinct groups were found to have different motivations for acquiring travel insurance in this investigation (which varies in travel insurance purchase experience). The research results are meant to provide both theoretical and practical contributions to the bodies of work on travel insurance and risk perception.
	The impact of the covid-19 pandemic on medical and travel insurance pricing and fraud risks: An exploratory study	Naseeb H., Diab A.A., Metwally A. (2021)	This study examines how the emergence of the coronavirus disease 2019 (COVID-19) in the Gulf Cooperation Council region has exacerbated many medical concerns. and traveling insurance industries (GCC).	The paper provides helpful advice for academics, insurers, and CROs studying and addressing pandemic risks.
	COVID-19 and the public perception of travel insurance	Tan D., Caponec chia C. (2021)	This research highlights the consequences of the COVID-19 pandemic on reverse adverse selection and how actors will develop new approaches to tackling this problem.	The importance of travel insurance has grown, and with it comes the need for more study into how best insurers can convey to customers the nature of their products' coverage, value, and risk.
Red	All my life to	Lim	Researchers have found	Indicative of the

Cluster: Risks	live: travel health benefits and risks for cancer survivors	J.H.C., Keenan C., Flaherty G.T. (2022)	serious gaps in the quality of travel health information offered by websites catering to patients with various chronic illnesses, including cancer. Anticipating the health advantages of trip for this group of individuals who are weakened owing to cancer care, this approach will cover the complete range of travel health concerns in this community, including typhoid fever risk reduction.	community's improved cancer survival and quality of life after diagnosis is its more all-encompassing approach to advising the traveler with cancer. Although the infectious illness risks associated with immunosuppressive medication are paramount, we recommend also taking into account the dangers of noncommunicable diseases and discussing the potential health advantages of overseas travel. The passport health impacts of this at-risk demographic should be better understood via future qualitative study.
	Travelling abroad with cystic fibrosis: Assessment of risks and healthcare requirements	Miller R., Blanch L., Lenaghan S., Anderson A., Doe S., Bourke S.J.	This research reveals that so many CF patients are visiting often and extensively, and embracing activities comparable to their contemporaries without CF. TSA screening times are lengthened because of the many issues they face while transporting	Individuals at a more advanced stage of CF may not be advised to travel internationally due to the high risk of complications. However, for people with less severe, stable CF, travel is often safe and low-risk. A person's current health state, not only their CF diagnosis,

		(2017)	drugs and other necessities.	should be used to determine the appropriate travel insurance premium to be paid in the event of medical emergencies while overseas.
	Travel health insurance: Indicator of serious travel health risks	Kniestedt R.A.S., Steffen R. (2003)	This research gives an insight in flight health hazards, enabling comparison of the incidence of quite various, major, health issues overseas.	The majority (69.4%) of the 242 claims were for diseases, while only 30.6% were for incidents; diseases were the most common illnesses, while injuries to the appendages were the most common types of accidents. While the ratio of illnesses to accidents was just 1:5 in developed nations and the Caribbean, it was more than 3:0 in certain poorer places of the world. There was a trend for accident propensity during the first week of study abroad.
Yellow Cluster: Purchase Behavior	What does insurance purchase behaviour say about risks?: A study in the Argentine context with	Korstanje M.E., George B.P. (2015)	The purpose of this research is to investigate the field of insurances as rituals of resilience and adaptability in the face of potential dangers. Perceived and actual risks have become a	Risk management experts and academics have built elaborate mathematical-statistical models of risk utilising cutting-edge probability theory and quantitative methods.

	special focus on travel insurance		common topic of study in the past few years.	
	Predicting the Willingness and Purchase of Travel Insurance During the COVID-19 Pandemic	Al Mamun A., Rahman M.K., Yang Q., Jannat T., Salameh A.A., Fazal S.A. (2022)	Using the framework of the theory of planned behaviour, this research investigated whether or not working persons were willing to obtain travel insurance to protect their health and safety during the COVID-19 epidemic. There were 1,118 working individuals surveyed from all throughout Malaysia to provide primary data, and this information was analysed using partial least squares structural equation modelling.	The desire to buy travel insurance was a significant factor in actually buying it. In reality, encouraging working persons to acquire travel insurance coverage requires a focus on travel insurance knowledge and perceived health risk.
	An analysis of traveler need for and willingness to purchase airline dynamic packaging: A Korean case study	Song W.-K., Lee H.C. (2020)	With the results of this research in hand, airlines catering to Korean clients will be better equipped to develop and execute business strategies that take use of lively wrapping on airline websites in order to upsurge auxiliary	This research demonstrates that it is worthwhile for airlines to provide commission-based auxiliary services to Korean passengers on their websites. One of the first steps to being a top travel commerce is for airlines to use flexible bundling

			revenue.	tactics that allow them to efficiently upsell and cross-sell.
Purple color: Travel emergency support and Safety	Characterization of Emergency Department Rabies Post-Exposure Prophylaxis Procedures with an Infectious Diseases Clinic Referral Process	Frederickson J.J., Monroe A.K., Hall G.A., Weant K.A. (2022)	High expenses, convoluted delivery techniques. Rabies thread prophylactic in the ER is associated with a time-sensitive vaccine sequence, rabies testing, and quarantine. (ED). The goals of this research were to describe the frequency with which patients sent to the ID Clinic had their vaccines administered in a different order than originally planned, to assess whether or not the clinic was following its own guidelines, and to identify areas for future	ID Clinic referral for rPEP significantly reduced the mean number of ED visits for repeat immunisation, saving 105 ED visits. Having health insurance was a major determinant in both the ID Clinic's referral system's use and the overall vaccine completion rate.
	Timing of Referral and Characteristics of Uninsured, Medicaid, and Insured Patients Referred to the Outpatient	Azhar A., Yennurajalingam S., Ramu A., Zhang H., Haider	The purpose of this study was to evaluate the similarities significant distinctions here between poor (those without health insurance), low-income (those on Medicaid), and medicare people who sought	Patients with little or no insurance were more likely to be younger, non-white, single, and in severe pain. They needed larger number of SCC follow-up visits. At our cancer centre, the timing of SCC referrals or follow-ups was

	Supportive Care Center at a Comprehensive Cancer Center	A., Williams J.L., Dibaj S.S., Liu D.D., Bruera E. (2018)	treatment at our rehabilitative centre (SCC).	not impacted by patients' insurance status.
	Safety advice for travelers from New Zealand	Leggat P.A., Heydon J.L., Menon A. (1998)	This research was meant to explore the doctors routinely provide their patients information on how to be safe, how to receive professional care abroad in case of emergency, and how to acquire health insurance while travelling.	The majority of general practitioners in New Zealand are not advising their patients who are travelling overseas on matters of individual care, health and travel cover, and admission to medical care, according to a cross-sectional research. Professional development courses should stress the need of informing their students of this warning. The advice that general practitioners in New Zealand gave their patients who were going overseas for medical care varied widely, and they referred their patients to a wide range of both medical and nonmedical resources.
